

G.P.A.: the grade point average; midshipmen are told that if their average was under 98.0, they could kiss getting a command goodbye; the truth is that Jim Kirk's GPA was 94.9; Sulu's was 95.2; field experience in deep space speaks in one's favor; even their hobbies and interests—such as fencing and martial arts titles—get you extra points; the cadet who graduated at the top of Kirk's class of 2254 with a GPA of 99.99 (he missed one question in his entire stay at Starfleet Academy) was relegated to pushing papers at Starfleet Headquarters for Admiral Komack's office because he couldn't think outside the box (source: "Helmsman" by Nomad, OAA)

"Gandalf": *nom de déplacement* of a quantum energy being who was rescued in 2288 by the crew of the *Enterprise-A* from the wreckage of a modest interstellar freighter, on the surface of a small, airless planet; outwardly, he appeared as a tall and thin humanoid, with long, shaggy hair not at all controlled by the headband he was wearing; the being passed an initial scan as Human, but a subsequent scan

showed nothing, and Spock could not sense the mental signature of the being; he appeared sloppily dressed, the hems at the bottom of his blue jeans having been worn ragged, and the tie-dyed T-shirt he was wearing was clearly in need of laundering; he spoke much like a hippie of the 20th century and took his name from the J.R.R. Tolkien character; ended up sharing a cabin with Ken Reichard, and decorated the lieutenant's cabin with posters, glowing in almost surreal colors as they interacted with a hidden ultraviolet light source; what areas of the wall were free of posters were adorned with psychedelic colors and designs; on top of all the rest, there was a multicolored light source, producing shapes that danced around the walls, floor and ceiling, their color and intensity varying and pulsating with the beat of the deafening music that filled the cabin, but made his changes disappear when Reichard appeared shocked by it all; he taught Reichard how to get more out of his music; he represented chaos in its positive form, and was opposed by a quantum energy being he called "Barney Fife" who represented order in its positive form; the two ended up doing battle far outside the local group of galaxies, and Gandalf won, due in part to the support from the *Enterprise-A* crew; Barney was put out of commission for the next millennium or so (source: "The Hitchhiker" by Jim Ausfahl, OAG)

Kirk); he received the captaincy of the U.S.S. *Challenger* from 2275 and remains its captain; in 2275, his ship backed up the *Enterprise* on a vigil patrol outside the Serenidad system (the Klingons had taken over the planet); the *Enterprise*, under the command of Kirk, went in and attacked a Klingon battlecruiser; the *Enterprise* itself was nearly destroyed by another battlecruiser which had been cloaked; Garrovick ordered the *Challenger* into the star system, and ordered the destruction of the remaining vessel; he then led the rescue team down to the surface of the planet; the Klingon forces were captured and committed ritual suicide; he received a minor injury to his face and eyelid from Commander Korak (who called him “Ga’rik”) as an honor for allowing the Klingon to commit ritual suicide (Garrovick supplied him with the blade); see “*DIQbatlh*”; in 2284, the *Challenger* was assigned as a support vessel during the peace mission to Xantharus (and the subsequent Battle of Xantharus IV); in 2294, he attended a party celebrating Chekov’s captaincy of the *Enterprise-B* (source: “Obsession” by Art Wallace, TOS2; “The Cost of Freedom” by Nomad & Linda McInnis, OAD; “Return to Xantharus” by Randall Landers, OAJ; *Chekov’s Enterprise* by Randall Landers, OAL)

Garth: 1) an Izarian male; Captain of the *Lexington*, he was called “Lord God King Garth” below decks; Raphael Rodriguez served with him; in the 2250’s, Garth was the hero of the battle at Axanar; in the 2260’s, Garth was injured on a mission, and his crew took him to Antos IV to see if these legendary people could help him; unfortunately, his injuries were so severe that he suffered mental damage; the Antosians taught him the secrets of cellular metamorphosis, and he used that to take over the Elba II facility; his plans were thwarted by Kirk and Spock, and once treated by a new drug, Garth recovered enough to achieve his freedom from the facility (source: “First Contact 101” by D.G. Genesis Crisis, The: the device constructed by the Project Genesis team was stolen by Khan Noonien Singh, a refugee from and product of late 20th century Earth's genetic engineering; the theft of the Genesis torpedo had nearly brought the galaxy to war; Klingons and Romulans saw it as the most powerful weapon ever invented; the Federation saw it as a method of terraforming lifeless worlds into those which could feed and provide homes for the people of the Federation before hunger and overpopulation became a problem for Federation worlds; after the Genesis torpedo exploded in the Mutara sector, and after a science ship was destroyed by the Klingons, the Federation shared what information it had with the Romulan Star Empire and the Klingon Star Empire; the information, without Doctors Carol or David Marcus to interpret it, is useless; Doctor David Marcus died at the hands of a Kh'myr warrior on the Genesis planet, and a year long search to locate Doctor Carol Marcus (his mother) was fruitless; in 2284, the Federation enacted the Treaty of Mutara with

the Klingons which promised that all Genesis technology would be destroyed and research abandoned; the Federation broke that treaty in 2285 when they built a second torpedo to use against the Kelvans (source: *Star Trek II: The Wrath of Khan* by Jack Sowards & Harve Bennett, TWoK; *Star Trek III: The Search for Spock* by Harve Bennett, TSfS; *In Harm's Way* by d. Genesis device: see “Genesis torpedo”

Genesis planet: a planet in the Mutara sector, created from the gasses of the nebula by the Genesis device; at first, a class M world; but because one of the creators of the Genesis device used protomatter in the matrix, the planet was unstable; it soon became an inferno of molten magma (source: *Star Trek II: The Wrath of Khan* by Jack Sowards & Harve Bennett, TWoK; *Star Trek III: The Search for Spock* by Harve Bennett, TSfS)

Genesis Project: see “Project Genesis”

Genesis torpedo: the device which when launched at a moon or another lifeless planetoid would re-create that planetoid with the end result being a life supporting class M environment; not planned to be used on a variable pulsar in a nebula, thus forcing the *Grissom* to do a complete solar survey prior to approaching the Genesis planet; in 2285, Starfleet constructed a second Genesis torpedo (Genesis II) and deployed it against the Kelvans on Rojan's World (source: *Star Trek II: The Wrath of Khan* by Jack Sowards & Harve Bennett, TWoK; *Star Trek III: The Search for Spock* by Harve Bennett, TSfS)

Coon, TOS1; “More Tribbles, More Troubles” by David Gerrold, TAS1; *Klingons!* by Randall Landers & Nomad, OAD)

Gervais, Yves, Admiral: a Terran male; aging, balding, thin Human with eyes of blue steel; he has no family; Chief of Security and Starfleet Intelligence from 2271 until 2295; he is extremely xenophobic (although he managed to keep this a secret for most of his career); as a commander in Starfleet Security, he hired a mercenary (see “Chak'ka”) to provoke a conflict between the Federation and the Romulan Empire in 2263; from 2270 until 2274, his assistant was Commander Cheryl Saunders, but she was unaware of his illogical actions; in 2275, he was captured by Talan who used a mind-sifter on him as a plot to kill James Kirk (who was in the Starfleet Medical Center on Earth); Gervais suspected something was wrong afterwards as he couldn't remember what he had done the night before, so he had himself psycho-probed; he learned of Talan's plans; he surprised the Kh'myr and “accidentally” killed him; the event was noted only by one woman who was later “promoted” to a hazardous duty station

where she was killed; in 2276, he was notified by the Caldonians of the topaline smuggling operations on Psi Scorpii VIII but did not act on the information; at the time, it was perceived as an oversight; in reality, Gervais simply chose to disregard the information; in 2284, he provided Starfleet intelligence briefings on the Kelvan invasion to Admiral Cartwright; in 2285, following the Kelvan War, Gervais offered Kevin Riley a substantial promotion in position within his staff, and Riley accepted; rumored to be leader of something far more sinister; the entire assassination of Gorkon in 2293 and the attempted assassination of the Federation president had no doubt been orchestrated by Gervais and those loyal to him, including Admiral Cartwright and Colonel West; unfortunately, this is completely unknown to the commanding admirals he has served: Nogura, Morrow, Cartwright, Smillie, Davis; in 2294, he served on a tribunal board of inquiry investigating the *Enterprise-B*'s disastrous encounter with the Nexus; he later kidnapped Sienna Gillette, had her mind wiped, and turned her into a personal sex slave; he was assassinated by the Albino in 2295 because Gervais had mindwiped the Albino's favorite operative Sienna Gillette (source: "Aftermath" by Nomad, OAE; *Liberation from Hell* by d. Ghan: a Yridian male; a mortician on Beta Eridani XII; his funeral home cremated the body of an individual purported to be Admiral Yves Gervais in 2295, thereby making recovery of the body virtually useless and an autopsy almost impossible; he attempted to extract 1500 Federation credits from the *Excelsior* because the funerary urn was allegedly modeled after one of Earth's "Ming the Merciless Mongol Dynasty"—apparently the Yridian was unaware that Ming the Merciless was a fictitious villain from *Flash Gordon*—Sulu ended up paying 12 credits for the urn and remains (source: *bortaS choQ* by Elizabeth Knauel, OAJ)

Ghanil: a humanoid race, native to Makus IV; they sought immortality with science, but unleashed a plague of vampirism on themselves, destroying their art, literature, science and culture; the Ghanil sought to live in harmony with the universe, not dominate it; they took what was needed to survive, and even then it was with reluctance; in the 900's A.D., they went from system to system, searching for a cure for their condition; the Ghanil are said to have explored many planets in Sector 12, but did not stay long in any one place; however, every planet where the Ghanil have supposedly landed have a similar legend of undead creatures walking the night, searching for blood; eventually, they returned home to Makus IV and fell into madness (source: *Drink Deeply* by Elizabeth Knauel and Nomad, OAA)

Ghanis: the class M home planet of the Ghanil; prior to 2264, it was believed to be the home of the Ghanil, an old race coming from Murasaki sector of the galaxy, forced by a planetary plague to abandon their home world and search the galaxy for a new home; Ghanis was not listed on any stellar map; in 2266, it was determined that Ghanis is in fact Makus IV (source: *Drink Deeply* by Elizabeth Knauel and Nomad, OAA)

Gorlan prayer stick: similar in concept to rosary beads, the Gorlans use these artifacts during their prayers (source: "Bloodlines" by Nicholas Sagan, TNG7)

Gorlans: a relatively peaceful humanoid race which seceded from the Federation in 2266; a member of the Barrier Alliance; Gorlans average 1.5 meters in height; they have a fondness for alcohol, but it affects them minimally; they have gray skins, elongated heads and hands, and are extremely reticent to talk (source: "Mirror, Mirror" by Jerome Bixby, TOS2)

Gorn: 1) Tau Lacertae IX, a class M planet (source: *Starfleet Medical Reference Manual* by Eileen Palestine, TOS) **2)** a species of very strong, slow-moving, heavily-boned, reptilian bipeds, their massive cerebral functions are dedicated mainly to thought and speech; their intelligence—quick and nimble—was in sharp contrast to their body; they possess compound eyes; the Gorn, with all their cerebral prowess, would never have achieved starflight; their features were just too massive, their fingers unable to attain the dexterity needed to build even the most basic electronics needed; it had been a chance encounter with the Medusans that had led to an on-going friendship and technological exchange that had made this possible; an aggressive race when they feel their territory has been violated; Gorn weaponry, however, is low-grade Klingon ordinance, and not nearly as powerful as their Federation equivalent; natives of the class M planet Tau Lacertae IX (which is located in Quadrant 25); a race of intelligent reptiles; seven feet tall average (6'4" is one of the shortest recorded heights for a Gorn); 200 kilograms average weight; cold-blooded race which flourishes in a tropical climate (Gorn ships maintain a temperature of 140°F); possess compound eyes like those of an insect; have a series of scutae which run from the crown to their buttocks; they are green; have protruding eyebrows; have two nostrils and ear holes; have opposable thumbs and two large fingers; slower reflexes than those of Humans; have three toes on each foot; their blood is red (iron-based); they wear brown leather guards on their forearms (similar to those worn by an archer); the crew of Gorn vessels wear gold tunics with a hexagonal pattern; in 2266, the Gorn attacked and destroyed the Terran colony on Cestus III, provoking a minor conflict which lasted a year; the conflict was resolved, and Cestus III was colonized by Humans and Gorn as a gesture of peace; Gorn are somewhat slow-moving as compared to Humans, but their strength more than makes up for this; they are not related to the Saurians (which were discovered in 2268 on the far side of Federation territory from the Gorn), but the two reptilian species work together quite well; from 2269 until the Gorn-Orion-Federation Peace Accords of 2284, the Gorn worked in conjunction with the Federation against the Barrier Alliance; in 2285, they joined the Federation; in 2287, their territory was invaded by the Kelvans, and though over fifty percent of their population was destroyed, they reestablished their civilization following the repulsion of the Kelvan invaders by Starfleet; they prefer to be referred to as the "Gorn," not "Gorns"; ironically, they prefer to refer to Humans as "Earthlings"; the Gorn achieved spaceflight as a result of buying technology from the Medusans; in the the 2290's, many of the Gorn are little more than brigands, actively engaging in

piracy with what's left of the Barrier Alliance Consortium (source: "Arena" by Frederick Brown, TOS1; *Starfleet Medical Reference Manual* by Eileen Palestine, TOS; "Return to Xantharus" by Randall Landers, OAJ; *In Harm's Way* by d. hypergravity: even ships in warp drive are affected by the extreme gravity (or hypergravity) generated by collapsed matter (black holes); it often takes 100% warp power to break free of a hypergravity source, and in some cases, only a slingshot effect can free a ship trapped in orbit above such a source; black holes, black stars and Questar M17 are known to generate hypergravity (source: "Beyond the Farthest Star" by Samuel Peebles, TAS1)

Hyperion, U.S.S., NCC-10100: built in 2273; the starship was being developed about the same time as the *Constitution*-class starships were being refit; it was decided that for economical reasons that refitting returning Connies, such as the *Enterprise*, would be far more practical and efficient; Montgomery Scott's upgrades to the warp engines dwarfed the expected output of the *Hyperion's* new warp impeller drive; *Hyperion* was posted in Earth orbit and eventually moved into SpaceDock where it sat for about ten years; in 2284, shortly after the WhaleSong Probe incident, Commander-Starfleet Cartwright had the *Hyperion's* status changed to active duty, and ordered a study of the warp impeller drive system; during its trials outside the Sol system, the *Hyperion* disappeared without a trace; the fact of the matter was that Starfleet Intelligence had received reliable intelligence from the Lyrians that there was a growing danger to this entire arm of the galaxy from a star-faring race in NGC-2548; the *Hyperion* was dispatched on a secret intelligence gathering mission to that cluster; she and her crew of thirty-eight failed to return; she was presumed lost en route to the cluster until Starfleet received an image of the *Hyperion*, in 2295, the *Enterprise-B* was sent on a mission to determine whether or not the disappearance of its crew indicated a threat to the Federation, to establish positive diplomatic contact with as many star-faring civilizations as possible, and to retrieve the *Hyperion* and her crew, if possible, otherwise, the ship was to be scuttled rather than allow her to fall into other hands;

Commander Uhura and Lieutenant Commander Saavik beamed aboard with Chief Engineer Sorenson, a few relief officers and a dozen security officers and made the ship ready for its return to Federation space; while reviewing the ship's logs, Uhura learned that Starfleet had noted that both the Blastoneurons of Lavinus V and the cosmoprotozoan had come from this general direction, and that Starfleet Intelligence was worried that someone out here was directly beginning to threaten the Federation; it was shortly after their arrival here that the Kelvan War broke out; *Hyperion's* orders, though, superceded all others, and the crew grudgingly continued on their mission; while studying this star's inhabitable world using their high-powered sensors, they were set upon by a Kelvan vessel and consumed so quickly that the crew was unable to self-destruct their ship; the vessel was left abandoned in an asteroid field; the Kelvans were being pursued by Romulans at that point and abandoned the ship; neither the Kelvans nor the Romulans returned to the *Hyperion*, the ship has an arboretum and botanical garden the size of the both the *Enterprise-B's* shuttlebays and engine room combined; it uses an unusual Lemoyne-Briggs transformer for generating antimatter; in 2296, command of the starship was given to Captain Uhura and the ship was assigned to Fleet Captain Chekov's Beta Quadrant fleet; the ship was equipped with sophisticated scanners, failure analysis systems, manufacturing and remanufacturing machinery from the team that assembled it and prepared it for its launch into the Beta Quadrant; upon its return, *Hyperion* was reclassified as a research/science vessel; its crew complement is listed at 92 (source: *Insanity's Child* by Randall Landers, OAL; "A Motley Crew" by Jim Ausfahl, OAK; "An Issue of Identity" by Jim Ausfahl, OAK)
